

## **DELOS ULTRAFILTRATION SYSTEM (POINT OF ENTRY)**

The Delos Ultrafiltration System targets pathogens like bacteria and viruses, removing viruses for >99.99% (log 4) and bacteria for >99.99999% (log 7). The presence of these organisms in drinking water can cause diarrhea, vomiting, cramps, headaches, fever and fatigue. The filter also reduces water sediment content and turbidity while permitting vital minerals to pass through.
